

Efficient communication between patient and physician

Telemonitoring of glycemia

New:
*Family relatives can
participate in the care*

*IS DEDICATED TO PATIENTS WHO NEED
TO BETTER COMPENSATE DIABETES AND
TO CONSULT PHYSICIAN ON DISTANCE.*

Service enables more intensive monitoring of patients by gathering complete and precise measurements of glycemia.

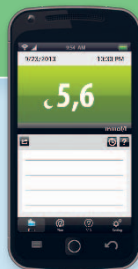

Measured data is automatically sent to web application where it is immediately accessible to privileged users.

Patient can consult physician on distance about the treatment while both having access to actual and historic measurements of glycemia.
